SUMMARY

Junior Android Developer with production mobile experience shipping a comprehensive POS checkout system — reactive state management, offline first data persistence, and camera based barcode integration. Strong CS fundamentals (Data Structures & Algorithms, OOP, Software Engineering) from a completed BSc in Computer Science. Currently building native Android projects with Kotlin, Jetpack Compose, and Room to extend cross platform mobile experience into the native Android stack.

TECHNICAL SKILLS

Languages: Java, Kotlin, Dart, Python, C/C++, JavaScript, SQL

Android & Native (in progress): Kotlin, Jetpack Compose, Android SDK, MVVM architecture, View Model, Live Data, Room, Coroutines, Retrofit

Cross Platform Mobile: Flutter, GetX (state management), Material Design, responsive/multiple screen size UI, iOS & Android

Tooling & Practices: Android Studio, Git/GitHub, RESTful API integration, offline first caching, unit testing & debugging, code reviews, Agile

Core CS: Data Structures & Algorithms, OOP, Software Engineering, Operating Systems, Computer Networks

EXPERIENCE

Mobile Application Developer — Gen-T AI Solutions

June 2026 – Present

- Shipped the checkout and shift management flow for a production POS app used by [store staff / X locations], cutting cash handling data integrity errors by [X%] through systematic debugging of race conditions in real time state updates.
- Delivered a fully offline capable checkout experience with zero data loss during connectivity drops, measured by [X% of transactions completed offline without sync errors], by building a local first caching layer with automatic background sync on reconnect.
- Cut average in store checkout time by [X seconds/%] by integrating camera based barcode scanning with real time product lookup against a REST API backend.
- Reduced design QA revision cycles to near zero across [X] screens by implementing pixel accurate, responsive UI matched against an existing desktop/web design system using Material Design components.
- Kept a [X] person cross functional team shipping on schedule across [X] sprints by collaborating daily in an Agile workflow with disciplined Git branching and structured code review practices.

PROJECTS

Food Delivery Mobile App — Flutter, Dart

- Built a cross platform food delivery app (Android & iOS) with Home, Orders, Login, and Profile screens and bottom navigation routing.
- Designed reusable custom widgets (FoodItemCard, CategoryCard) for a scalable UI architecture; implemented search, category browsing, and card based menu listings.

Image Compression Tool — Java, Swing, DSA

- Built a desktop GUI application implementing JPEG, Run Length Encoding, and Huffman Coding from scratch, using frequency analysis, a min heap priority queue, and binary tree construction.
- Implemented a row by row RLE encoder with binary file I/O and an interactive file picker interface with real time compression feedback.

Smart Resume Analyzer — Python, FastAPI, React.js, NLP

- Developed a full stack web app with a REST API (FastAPI, JWT auth) and an NLP pipeline (scikit-learn / spaCy) scoring resume to job description ATS compatibility, with role based candidate/employer dashboards.
- Live Demo:* resume-analyzer-eight-ecru.vercel.app

EDUCATION

Bachelor of Science in Computer Science

2022 – 2026

GC University Lahore, Pakistan
